

VS Code + AWS Account Setup Guide (Steps 1–10)

Ready-to-copy commands included.

Step 1: Install VS Code

Download and install VS Code from <https://code.visualstudio.com>

Step 2: Install Python

Verify Python installation.

```
python --version
pip --version
```

Step 3: Install AWS CLI (Official AWS Method)

Follow the AWS CLI installation guide:

<https://docs.aws.amazon.com/cli/latest/userguide/getting-started-install.html>

```
# Verify installation
aws --version

# Windows (PowerShell)
msiexec.exe /i https://awscli.amazonaws.com/AWSCLIV2.msi

# macOS
curl "https://awscli.amazonaws.com/AWSCLIV2.pkg" -o "AWSCLIV2.pkg"
sudo installer -pkg AWSCLIV2.pkg -target /

# Linux x86_64
curl "https://awscli.amazonaws.com/awscli-exe-linux-x86_64.zip" -o "awscliv2.zip"
unzip awscliv2.zip
sudo ./aws/install

# Verify again
aws --version
```

Step 4: Create an IAM User

Create an IAM user with programmatic access and save the Access Key ID and Secret Access Key.

Step 5: Configure AWS CLI

Run the following command and provide your credentials.

```
aws configure

AWS Access Key ID: <YOUR_ACCESS_KEY>
AWS Secret Access Key: <YOUR_SECRET_KEY>
Default region name: us-east-1
Default output format: json
```

Step 6: Verify AWS Connection

Validate access to AWS.

```
aws sts get-caller-identity
```

Step 7: Install AWS Toolkit Extension

In VS Code Extensions, install AWS Toolkit.

Step 8: Install Recommended Extensions

Python Jupyter AWS Toolkit Docker (Optional) GitHub Copilot (Optional)

Step 9: Create a Python Virtual Environment

Create and activate a virtual environment.

```
# Create virtual environment
python -m venv venv

# Windows
venv\Scripts\activate

# macOS/Linux
source venv/bin/activate

# Install AWS SDK
pip install boto3
```

Step 10: Test AWS from VS Code

Create test.py with the following code and run it.

```
import boto3

sts = boto3.client("sts")
print(sts.get_caller_identity())

# Run
python test.py
```
